DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I (claims 1-10) in the reply filed on 10/6/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 11-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Mori et al. (US 5510168).

Art Unit: 1773

Mori et al. disclose a magnetic recording tape having a non-magnetic substrate and upper and lower magnetic layers thereon. The layers contain iron particles and an abrasive material such as alumina (corresponding to the claimed "head cleaning agent") dispersed in a binder. The reference discloses an example wherein the amount of alumina (head cleaning agent) is present in an amount of 10 pbw based on 100 pbw of magnetic metal powder. See col. 5, lines 27-32 see col. 11, lines 1-20.

The reference does not disclose the claimed abrasivity index of the recording medium. The examiner takes the position that the structure taught by Mori et al. inherently satisfies the claim limitations directed to abrasivity index by virtue of the fact that the reference discloses a structure that is substantially the same as claimed (i.e., magnetic metal particles containing Fe dispersed in a binder with an alumina head cleaning agent).

It has been held that where claimed and prior art products are identical or substantially identical, or are produced by identical or substantially identical processes, the burden of proof is shifted to applicant to show that prior art products do not necessarily or inherently possess characteristics of claimed products where the rejection is based on inherency under 35 USC §102 or on prima facie obviousness under 35 USC §103, jointly or alternatively. *In re Best, Bolton, and Shaw*, 195 USPQ 430. (CCPA 1977).

In the alternative, the examiner takes the position that it would have been obvious to one of ordinary skill in the art to determine the optimal value of the abrasivity index of the magnetic layer taught by Mori et al. Such an optimization would have been obvious in view of Mori's teaching of adding abrasive materials to the recording medium. In the absence of evidence of any criticality associated with the claimed Abrasivity Index values, the examiner maintains that

determining the optimal value of this parameter would have been a matter of routine experimentation.

With regard to the limitations of claims 8-9, it is the examiner's position that the recitations of a DLT tape are recitations of intended use. The recording medium taught by the prior art are substantially the same as claimed are therefore, would be expected to be capable of functioning in the claimed capacity. These limitations do not add any structural features to the magnetic recording medium defined in claim 1 and therefore, do not patentably distinguish over the prior art.
